Libraries are playing very important role in society by giving all the advanced information to users in many ways. The term marketing of library services is not new. The term marketing promotion for profit and in particular for money. As far as libraries are concerned, they are non-profit organization but the meaning of present day marketing is not only to get profit but also to make all types of users aware with the products. Now-a-days companies are marketing their products through internet. Mobiles newspapers, online shopping stores, television etc.

### **Words Algorithm Collection - finding closely related open access books using text mining techniques**

Open access platforms and retail websites are both trying to present the most relevant offerings to their patrons. Retail websites deploy recommender systems that collect data about their customers. These systems are successful but intrude on privacy. As an alternative, this paper presents an algorithm that uses text mining techniques to find the most important themes of an open access book or chapter. By locating other publications that share one or more of these themes, it is possible to recommend closely related books or chapters.
